

## TRAINING APPLICATION

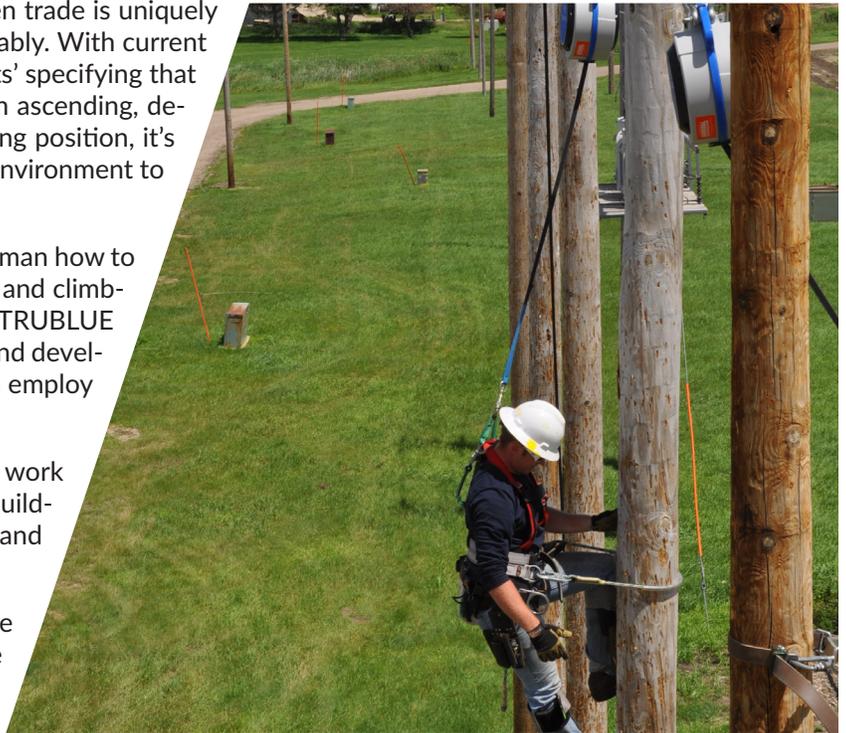

### TEACH LINEMEN HOW TO CLIMB & SELF-ARREST WITH A TRUBLUE AUTO BELAY

The effectiveness and viability of the power linemen trade is uniquely tied to the ability to climb poles safely and comfortably. With current OSHA Best Practice guidelines for 'Safety at Heights' specifying that Fall Protection Equipment (FPE) shall be used when ascending, descending, changing position and when in the working position, it's essential to involve FPE equipment in the training environment to get lineman familiar with its proper use.

The TRUBLUE Auto Belay is perfect for training linemen how to self-arrest, a vital safety skill for working at heights and climbing with FPE. With its smooth, controlled catch, the TRUBLUE allows students to focus on their climbing abilities and developing the muscle memory to self-arrest so they can employ those skills when they need them most.

For a trainer on the ground, TRUBLUE allows you to work multiple poles with confidence and focus on skills-building and teaching climbers how to ascend, descend, and work more efficiently.

With its advanced technology and design, extensive cycle counts and an easy annual recertification, the TRUBLUE Auto Belay is an essential component of any lineman training environment.

*"The TRUBLUE Auto Belay is hands down the best training tool for teaching fundamental climbing skills. Without it my students would not develop the proper climbing technique that will make them a better line worker."*

**- Scott Meinecke, Powerline Instructor**

TRUBLUE features a self-regulating eddy current magnetic braking system. Designed for climbers, it helps mitigate risk and teach linemen the fundamental skills of fall arrest.

- Meets strict international safety standards for fall arrest devices
- Braking resistance adjusts automatically to the weight of the climber, up to 330 lbs.
- Simple installation and easy relocation, all with a minimal cost of ownership
- Available in lengths up to 65 feet (20 m)
